The configuration needed to verify the validity of publicly issued qualified digital certificates used for digital signing in Adobe Reader

Adobe Reader allows you to verify the validity of publicly issued qualified digital certificates through LDAP and the points of distribution of the revoked certificates (CRL).

The configuration needed to verify the validity of the digital signature using the Microsoft store (based on the default acceptance of the root certificates):

I. Open the EDIT menu and then select PREFERENCES
II. Select the SECURITY menu from the list on the left and then click on ADVANCED PREFERENCES

![Advanced Preferences](image)

III. Select the WINDOWS INTEGRATION tab

![Windows Integration](image)
IV. Check the 3 boxes and then click OK twice in order to close the windows.
